In the dorsal view (Fig. 5) it will be observed that a lateral expansion has taken place both caudad and cephalad to the deep constriction (/ ). The expansion involves segments 6 and 7 and occurs also in the chick. The limits of the five anterior segments were marked by both external and internal transverse grooves and these segments could therefore be clearly counted. Since segments 2 and 3 are reciprocally wedge-shaped their relative width in a dorsal view depends upon the optic plane in which they are observed. The camera tracing of Fig. 5 is taken from a median horizontal plane, and segments 2 and 3 are therefore equal in size. As can be seen in the profile views, the embryos at this age are curved ventrally to conform to the spherical yolk upon which they rest. Fig. 5 was sketched from...
